Channel installation ideas for cable & rod installations

Channel solves many installation challenges:

- use channel when you wish to change the poster sizes and need different cable/rod centres
- use channel to create a feature area
- use channel to bring the display away from the wall or window
- use channel to bridge over a poor fixing area
- channel allows tremendous fixing flexibility. You can position cables anywhere along their length

Accessories can make an enormous difference to the power of your presentation. Create highly attractive hard-working projects

Graphic display

Your choice of finishes & material

More than just clear acrylic... be adventurous and turn a simple design into something spectacular...

Imagery...

Screen printing

Create high quality text and logo images.

Vinyl lettering

An inexpensive option, ideal for simple lettering.

Acrylics...

Non-reflective acrylic - used to increase visibility in sunny windows or to reduce the glare from spot lighting.

Silicone - green edge, looks like glass.

Sandblast effect - looks like sandblasted glass and does not show dust. Creates impressive screens and background panels.

Coloured acrylic - solid colours create ideal background panels.

Acrylic pockets & poster holders

A wide range of pocket types and sizes are available to suit any display requirement. Shown here are just some of the options available - if you want a special size or shape, please call to discuss your requirements.

Fixing systems

WM11
(p33)

Hook-on wall mounted pockets/leaflet dispensers:

- fix to the wall with WM11 which will give a good solid fixing to any type of wall. Use R1000P for single bays and R1500 for continuous runs
- projects centre of rod 24mm away from the wall. Use HAS to ensure display hangs vertical
- fix WM11 support every 484mm on horizontal rod

P02 + RS03

Item Code:	Description:
KC33/S	Satin acrylic without pocket
KC33-P/S	Satin acrylic with pocket

Low voltage straight lights (20 watt max) are supplied with all our cube kits. Position them diagonally between cables

Cubes can be placed side by side sharing a pair of cables. Only use 3 lights per pair of diagonal cables

Cubes can be suspended on cables or rods. Ask about customised cube displays, including security features, integrated graphics and lighting

Adding low voltage lighting to your cable or rod displays will increase visual impact and increase your sales by up to 107%

- Quick and easy to install
- Light fittings are easy to specify - just follow our step-by-step guide on the next page
- All you need to complete the installation is an electrical spur, positioned within 2m of the transformer
- No need to use special cables - our lighting uses our standard cables or rods, retaining strength and load bearing capacity

HOW MANY LIGHTS CAN I PUT ON ONE PAIR OF CABLES*?

The answer to this lies in the type of light you have selected

Single lights are powered on a 12V system and require a 60W transformer (order code LT60-12)

This means on one pair of cables fitted with a 60W transformer you can have:

1 x 50W light

or

Up to 3 x 20W lights

Double lights are powered on a 24V system and require a 100W transformer (order code LT100-24)

This means on one pair of cables fitted with a 100W transformer you can have:

2 x 50W lights

or

Up to 4 x 20W lights

***Remember, only one transformer per pair of cables.**

For light configurations other than those above, please call.

Choosing your lighting...

This guide will help you choose the right lights for your displays and ensure you select all the right component parts, giving you easy, problem-free installation.

When you know what your display is going to look like and consist of (display panels, shelves, leaflet holders), you can choose lights to maximise their impact. Just follow this easy step-by-step guide:

- 1** Check the panel on the left to see how many lights you can put on one pair of cables
- 2** Next choose the style of lights you'd like (see pages 53 to 56).
- 3** Remember to add the correct transformer, power connectors and isolators to your order (see page 59)
- 4** Choose which lamps you want - standard dichroic lamps (20 or 50 watt) are included in the price of the fitting. See page 59 for extra long life, extra bright or coloured lamps

That's it! Place your order and look forward to boosting your sales with exciting displays!

Important fitting information:

- Digital screens should only be installed onto 6mm rod systems
- Cold cathode light boxes can be installed onto 1.5mm cable - maximum 60 watts, or 6mm rods maximum 200 watts
- **All power supply is DC**
- 17" Screen rated at 60 watts /12 volt
- 27" Screen rated at 120 watts /24 volts
- A3 Light box rated at 20 watts /12 volt
- 670 x 420 Light box rated at 30 watts /24 volt

Mix and match the units by adding the accumulated watts and providing the figure is under the maximum system wattage then you can install the units.

Ordering checklist:

1. Cables (lightboxes only) or rods for lightboxes and digital screens
2. VESA mounts for digital screens when mounting directly to the wall or suspending from ceiling poles
3. Select suitable transformer from list above
4. Power connectors (p59)
5. Four supports per unit (p21 - cables; p33 - rods)
6. Isolators (p59)
7. Spare compact flash card or USB stick (from local supplier)
8. Software - discuss with client what software they will use to update system. Recommend DVD pix player for the non-professional - full details on request
9. Guarantee level required - e.g. return to base or full service level. Needs to be agreed at point of order
